Liquid distributor

Technical data sheet

Developed with IVS expertise,
specialist in steam and liquid dosing.

Compact design 

Reliable A-quality components 

Modular installation 

Liquid distributor

Perfect distribution of liquids.

A customer-specific Liquid distributor is essential in ensuring the perfect distribution of the liquids that are to be dosed in a production process.

The design takes into account aspects such as the specifications of the liquid to be dosed, dosing time, minimum and maximum dosing quantity, dosing pressure and the number of dosing points. Each Liquid distributor is engineered according to the latest quality requirements and is available with the necessary quality labels if required.

Developed with IVS expertise, specialist in steam and liquid dosing.

Options

- ✓ Available in steel and stainless steel
- ✓ Suitable for hot and cold liquids
- ✓ Heated and insulated version possible
- ✓ Can be expanded for more than one liquid
- ✓ Available with all necessary quality labels if required

Advantages

- ✓ Compact design that saves space around the relevant receiving unit
- ✓ Reliable A-quality components ensure longer service life and minimal downtime in the production process
- ✓ Modular installation creating a uniform whole
- ✓ Multiple dosing points distribute liquids evenly for improved homogeneity
- ✓ Simple nozzle assembly and disassembly, eliminating production downtime during inspection
- ✓ Maintenance-friendly due to multiple specifically positioned shut-off valves and discharge options
