

**OTTEVANGER**  
PROCESS SOLUTIONS

# Smart steam dosing unit

Technical data sheet

Developed with IVS expertise,  
specialist in steam and liquid dosing.

Compact design

Anticipating data facilitates predictive maintenance

Easy to install using instructions supplied with the unit

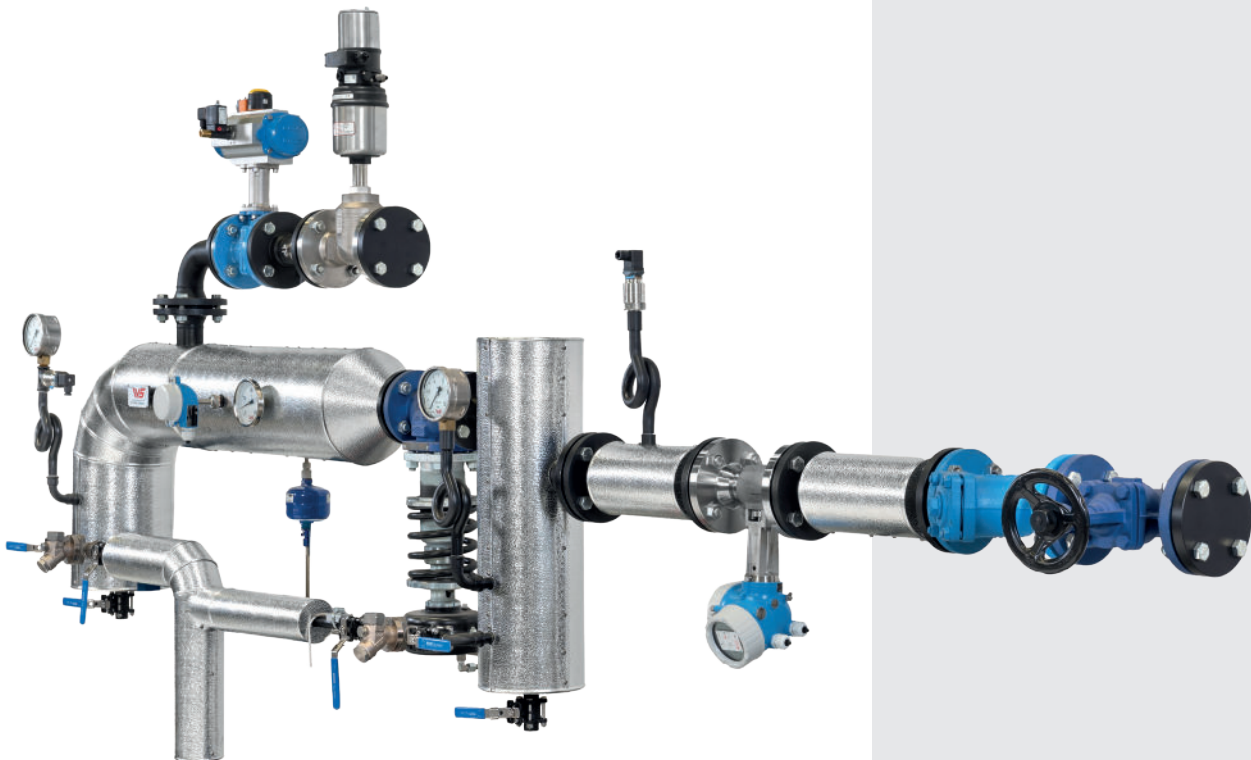

# Smart steam dosing unit (SSDU)

Adding steam is a vital step in many production processes.

The quality of the supplied steam is an important factor.

Ottevanger has fitted the SSDU with various sensors as an upgrade to the standard steam dosing unit, enabling the collection of valuable data. This offers users a user-friendly tool that offers insight into the quality of the steam process, enabling the timely anticipation of possible bottlenecks. Moreover, the Remote Terminal Unit enables the comparison between different steam processes of multiple production lines.

Developed with IVS expertise, specialist in steam and liquid dosing.

## Advantages

- ✓ Anticipating data facilitates predictive maintenance
- ✓ Process optimisation through various comparison options
- ✓ Increases user expertise regarding steam dosing
- ✓ Assembled product enables direct application
- ✓ Compact design
- ✓ Easy to install using instructions supplied with the unit
- ✓ Reliable A-quality components ensure longer service life and minimal downtime in the production process
- ✓ Maintenance-friendly due to multiple specifically positioned shut-off valves and discharge options
