Storage for all types of hot
and cold liquids

Storage tanks in all
shapes and sizes

Storage tanks

Store cold and warm liquids safely and easily.

It is easy to store large quantities of liquids in stainless steel storage tanks. Ottevanger's range includes such tanks, which we supply to the feed, food and chemical industries, among others. We supply tanks with capacities from 100 to 500,000 litres for both hot and cold storage of liquids.

These storage tanks are assembled in our own workshop in accordance with the specific wishes of the customer, and include pipework, platforms and insulation. Everything is built according to EN14015, the tank construction standard. We can also build a complete tank park, from start to finish: production, transport, placement and installation.

Developed with IVS expertise, specialist in steam and liquid dosing.

Features and advantages

- ✓ Storage for all types of hot and cold liquids
- ✓ Storage tanks in all shapes and sizes
- ✓ Single and double-walled tanks, both new and used
- ✓ Turnkey project management
- ✓ Tanks, piping and insulation made to measure
